by demanding only
POLYCARBONATE
LIGHT PANELS
for your new patio
roof or outdoor
entertaining area.**

Why you should say **NO to Fibreglass Light Panels**

The photographs on the opposite page are of an awning approximately 7 years of age. The standard material for the light panels at the time of installation was fibreglass.

Note how the top side of the panel has deteriorated as the resins in the fibreglass break down. Aside from the reduced light transmission of this panel and the unsightly appearance from the underside, this panel would offer very little resistance to impact from hail stones or flying debris in the event of a storm.

DEMAND THE BEST
